LETTER OF RECOMMENDATION

Bonafarm, a Hungarian capital group specializing in the food processing and agriculture, would like to recommend INFINITE & DOCCA as a reliable company, which possesses expertise and professional tools to run comprehensive implementation processes of the Electronic Data Interchange (EDI) systems.

In the course of long-term cooperation INFINITE & DOCCA launched three major services for Bonafarm. The first project comprised the introduction of EDI technology, what enabled automating the communication within the supply chain. This substantially limited the time needed for delivery fulfillment, in particular with large-scale recipients, consequently contributing to more effective business relations. Archiving services, operating in compliance with the binding law, have followed. As a result Bonafarm could automate time-consuming archiving processes, what was primarily reflected in the cost-cuts. Drawing on the success of EDI system implementation, Bonafarm decided to introduce EDInet PKI Adapter, which enabled issuing, sending and receiving e-invoices for smaller recipients.

Experienced employees, technical and organizational skills are the guarantee of the top quality services. It is worth mentioning that the EDI services meet all security demands and legal requirements when it comes to the documents transfer and archiving.

INFINITE & DOCCA is a business partner worth recommendation, especially in the context of long-term cooperation. The implementation processes were completed according to the schedule, while they did not hinder the course of our business activity.
